

## Xanh SM - Current-State Workflow

1. Driver reports battery incident - 2 min

HANDOFF: driver -> dispatcher

2. Dispatcher looks up vehicle GPS - 2 min

HANDOFF: dispatcher -> map dashboard

3. Search available compatible charging station - 5 min

BOTTLENECK: wrong connector or stale availability

4. Write route guidance SMS - 5 min

BOTTLENECK: manual lookup and composition

5. Call mobile rescue if required - 1 min

TOTAL MANUAL PROCESS: 15 minutes per incident

Legend: HANDOFF = information transfer; BOTTLENECK = slow/error-prone step
